

The portrait of anxiety

Upjohn

The Upjohn Company
Kalamazoo, Michigan 49001 USA

Please see adjacent page for brief summary of prescribing information.

©1988 The Upjohn Company

is often complicated

With associated depressive symptoms.

In double-blind, four-week clinical trials in 632 patients with moderate to severe anxiety, therapy with XANAX was compared with placebo.

XANAX was significantly more effective ($P < .001$) than placebo in relieving the anxiety, with over half of the patients showing marked to moderate improvement by the first evaluation period (one week).

In addition, over 70% of these patients experienced associated moderate to severe depressed mood. XANAX was shown to be significantly more effective ($P < .014$) than placebo in improving the associated depressed mood.

With associated cardiovascular symptoms.

Almost 60% of patients in the study had anxiety with associated cardiovascular symptoms even though cardiovascular disease had been ruled out. XANAX was shown to effectively relieve anxiety including the associated cardiovascular symptoms.

XANAX, the first of a unique class—the triazolobenzodiazepines.

■ **Well tolerated**—Side effects, if they occur, are generally observed at the beginning of therapy and usually disappear with continued medication. Drowsiness and light-headedness were the most commonly reported adverse reactions.

■ **Sustained efficacy**—No reported increase in dosage during 16-week clinical study, once an appropriate dosage was achieved. Since long-term effectiveness of XANAX has not been established, it is recommended that it not be used for longer than 16 weeks.

■ **Simple dosage**—0.25 to 0.5 mg t.i.d.

TABLETS 0.25, 0.5 & 1 MG
Xanax[®]
alprazolam[®] IV

for the relief of complicated anxiety

UNCONVENTIONAL!

Who says you have to book your professional gatherings where there are crowds, polluted air and gridlock? Man wasn't meant to meet like that. But we don't have to tell you that... you're a doctor.

Try something different next time. We invite you to have your next symposium or conference in an atmosphere of relaxation, to trade that roar of the freeways for the soft sounds of the blue Pacific.

Pismo Beach has facilities which are ideal for conventions, up to 370 in banquet-style seating and 700 in a theater setting. We have some of the finest dining spots in the West, if you like to eat and talk at the same time, or some quiet rooms where fanfare sunsets could compete with your guest speaker.

You certainly don't give up anything — except maybe smog, crowds and gridlock. About half-way between Los Angeles and San Francisco, you'll find what memories are made of. Spend your off-time exploring our charming back roads and local wineries, maybe hop up the road and catch Hearst Castle. Or just dig your toes in the soft sands of our wide beach and relax — just about the best medicine in the world for nerves that are a bit frayed around the edges.

Check with Convention Manager Wendy Burgener for the details. It doesn't cost a cent, and it could be the start of something slightly unconventional.

So many others have discovered California's Great Get-away. Isn't it about time you did?

MEDICAL OFFICE MANAGEMENT SYSTEM

Complete with Hardware, Software, Support

We feature IBM, COMPAQ, KAYPRO, AST, LEADING EDGE, EVEREX, MATRIX, AND MUCH, MUCH MORE!

Software Highlights:

- Insurance Forms (Medical, Medicare, Private Group)
- Electronic Billing (Medicare, Medical)
- Patient Ledger
- Medical Information
- Management Reports (Monthly, Daily, AR, etc.)
- Recall System
- Simple Word Processor with Mail Merge
- Mailing List and Personalized Letters
- Referral Tracking System
- and More!!!

Software Alone on Sale \$1850.00
with Full Training

Options:

- Modem for Electronic Billing
- Multi-Station Software
- Communication Home to Office
- One Year Software Support
- Extended Training

Other Hardware & Software configurations available.
On site service contracts available on request

(Dental and Pharmacy Versions Available)

- Improve Your Cash Flow
- Improve Efficiency of Your Staff

Unlike most terminal cases, there is a cure for medical computer terminal anxiety:

With the wave of a wand, the bar code reader brings files to your fingertips. It's faster and eliminates keyboard errors that are made with other systems.

We've specialized in nothing but medical systems for more than a decade. Using reliable Hewlett-Packard equipment, our system

was developed, tested and proven in offices just like yours. With our system,

you instantly have access to medical records, insurance forms, appointment schedules, you name it.

With the conversion is painless. We provide the most complete installation service including customer training, key-punching of your information and ongoing customer support. And since your new system will be tailored to meet your special needs, you will see the very best results.

Now that you know there's a cure for your terminal anxiety, why wait any longer? Call for your demonstration today.

INVESTMENT GROUP

INTRODUCING THE KOALA.™

RARELY HAVE
THE DYNAMICS OF
SUPPLY AND
DEMAND SO
OVERWHELMINGLY
FAVORED
THE INVESTOR.

Platinum has countless uses throughout the entire spectrum of modern technologies. And yet, as useful as platinum is in terms of application, it is extremely scarce in terms of supply.

EARTH'S RAREST PRECIOUS METAL.

Each year, only 80 to 90 tons of platinum reach western markets. Despite intensive mining and dogged prospecting, this modest production has remained relatively constant over the past decade.

YOUR CHOICE FOR ENDURING INVESTMENT VALUE.

While platinum demand grows, new supplies remain negligible. This chronic imbalance has earned the long-term investor a significant return—\$1,000 invested in platinum in 1977 would today be worth over \$3,000—a three-fold increase!

Other important reasons to invest in platinum include:

- ☐ Platinum has outpaced stocks, bonds, gold and silver since 1985.
- ☐ Platinum has normally outperformed gold when metals markets are rising.

AT LAST, A COIN
THAT FULFILLS
THE INVESTMENT
PROMISE OF
PLATINUM.

THE AUSTRALIAN
K O A L A
THE PLATINUM STANDARD.™

— FREE —
1988-U.S. Silver Eagle

For first 100 orders
with this coupon only.

- ☐ Platinum has been an effective hedge against inflation.
- ☐ Increasingly, financial advisors recommend that 15-20% of a portfolio should be in precious metals, including platinum.

THE PLATINUM KOALA.™

Australia has now created the perfect vehicle for the investor to profit from platinum's outstanding fundamentals—the Platinum Koala. Available in four denominations from leading coin dealers, brokerage firms and banks, the Koala is issued as legal tender under the Australian Currency Act.

RECOGNIZED WORLDWIDE AS A HIGHLY LIQUID INVESTMENT.

The Koala is remarkably easy to buy and sell; its price is based on the international platinum bullion price, plus a small premium for minting and handling.

The Koala is a coin of the highest purity (99.95% pure platinum) and exceptional beauty—each Koala is exquisitely designed and extensively frosted for a luminous brilliance that is unmatched by other platinum coins.

600 BROADWAY. SEATTLE'S PREMIERE MEDICAL OFFICE BUILDING.

Access is definitely an asset. With this in mind, the new **600 Broadway Medical Office** offers your practice a prestigious facility in the midst of the Northwest's most concentrated health care and biotechnology environment, Seattle's First Hill.

In this ideal location is an exceptional building. Six floors of eminently flexible space configurations, Class A building standards, state-of-the-art air conditioning, and a host of available amenities further enhance the total concept of this outstanding facility.

By design, this building is gracious and very usable. From the outside, **600 Broadway** has the look of quality, a blend of unique character and style.

On the inside, **600 Broadway** offers approximately 130,000 square feet of prime medical office space on six floors. Floors range from 12,000 to 28,000 square feet and are available on a full-floor or multi-tenant basis. **600 Broadway's** six floors are atop five levels of underground parking, two of which include spaces specifically reserved for physicians. The building contains four elevators, connecting all floors and parking levels. Occupancy is projected to be mid-1990.

“Doctor, it still hurts.”

Despite all your best efforts – surgery, medication, physical therapy – her debilitating pain has continued for six months or more. It's frustrating and demanding for you, and agonizing for her.

Fortunately, now there's an answer. The Institute of Pain Management at Memorial Hospital Ceres combines proven medical and behavioral techniques in a multidisciplinary program that can:

- Teach self-administered pain control techniques
- Reduce anxiety and muscle tension
- Eliminate drug dependency
- Improve sleep patterns
- Improve family relations and ability to work
- Reestablish a sense of self-control

If you have a patient who has experienced chronic pain – back pain, headache, diabetic neuropathic, arthritis or any other type of pain – that's lasted six months or more, the Institute of Pain Management can act as your partner in bringing the pain to a manageable level. We handle all insurance paperwork and legal documentation as well. Call us to refer your chronic pain patients.

CARAFATE® (sucralfate) Tablets

BRIEF SUMMARY

CONTRAINDICATIONS

There are no known contraindications to the use of sucralfate.

PRECAUTIONS

Duodenal ulcer is a chronic, recurrent disease. While short-term treatment with sucralfate can result in complete healing of the ulcer, a successful course of treatment with sucralfate should not be expected to alter the post-healing frequency or severity of duodenal ulceration.

Drug Interactions: Animal studies have shown that simultaneous administration of CARAFATE (sucralfate) with tetracycline, phenytoin, digoxin, or cimetidine will result in a statistically significant reduction in the bioavailability of these agents. The bioavailability of these agents may be restored simply by separating the administration of these agents from that of CARAFATE by two hours. This interaction appears to be nonsystemic in origin, presumably resulting from these agents being bound by CARAFATE in the gastrointestinal tract. The clinical significance of these animal studies is yet to be defined. However, because of the potential of CARAFATE to alter the absorption of some drugs from the gastrointestinal tract, the separate administration of CARAFATE from that of other agents should be considered when alterations in bioavailability are felt to be critical for concomitantly administered drugs.

Carcinogenesis, Mutagenesis, Impairment of Fertility:

Chronic oral toxicity studies of 24 months' duration were conducted in mice and rats at doses up to 1 gm/kg (12 times the human dose). There was no evidence of drug-related tumorigenicity. A reproduction study in rats at doses up to 38 times the human dose did not reveal any indication of fertility impairment. Mutagenicity studies were not conducted.

Pregnancy: Teratogenic effects. Pregnancy Category B. Teratogenicity studies have been performed in mice, rats, and rabbits at doses up to 50 times the human dose and have revealed no evidence of harm to the fetus due to sucralfate. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Nursing Mothers: It is not known whether this drug is excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when sucralfate is administered to a nursing woman.

Pediatric Use: Safety and effectiveness in children have not been established.

ADVERSE REACTIONS

Adverse reactions to sucralfate in clinical trials were minor and only rarely led to discontinuation of the drug. In studies involving over 2,500 patients treated with sucralfate, adverse effects were reported in 121 (4.7%).

Constipation was the most frequent complaint (2.2%). Other adverse effects, reported in no more than one of every 350 patients, were diarrhea, nausea, gastric discomfort, indigestion, dry mouth, rash, pruritus, back pain, dizziness, sleepiness, and vertigo.

OVERDOSAGE

There is no experience in humans with overdosage. Acute oral toxicity studies in animals, however, using doses up to 12 gm/kg body weight, could not find a lethal dose. Risks associated with overdosage should, therefore, be minimal.

DOSAGE AND ADMINISTRATION

The recommended adult oral dosage for duodenal ulcer is 1 gm four times a day on an empty stomach.

Antacids may be prescribed as needed for relief of pain but should not be taken within one-half hour before or after sucralfate.

While healing with sucralfate may occur during the first week or two, treatment should be continued for 4 to 8 weeks unless healing has been demonstrated by x-ray or endoscopic examination.

HOW SUPPLIED

CARAFATE (sucralfate) 1-gm tablets are supplied in bottles of 100 (NDC 0088-1712-47) and in Unit Dose Identification Paks of 100 (NDC 0088-1712-49). Light pink scored oblong tablets are embossed with CARAFATE on one side and 1712 bracketed by C's on the other. Issued 1/87

Carafate[®] for the ulcer-prone NSAID patient

Aspirin _____ and other nonsteroidal anti-inflammatory drugs weaken mucosal defenses, which may lead NSAID _____ users to become prone to duodenal ulcers! For those NSAID _____ users who do develop duodenal ulcers, CARAFATE[®] (sucralfate/Marion) is ideal first-line therapy. Carafate rebuilds mucosal _____ defenses through a unique, nonsystemic mode of action. Carafate enhances the body's natural healing ability while it protects damaged mucosa from further injury. So the next time you see an arthritis patient with a duodenal ulcer, prescribe nonsystemic Carafate: _____ therapy for the ulcer-prone patient.

Unique, nonsystemic

CARAFATE[®]
sucralfate/Marion

VASOTEC[®]
(ENALAPRIL MALEATE | MSD)

For a Brief Summary of Prescribing Information,
please see next page of this advertisement

VASOTEC

(ENALAPRIL MALEATE) MSD

Contraindications: VASOTEC® (Enalapril Maleate, MSD) is contraindicated in patients who are hypersensitive to this product and in patients with a history of angioedema related to previous treatment with an ACE inhibitor.

Warnings: **Angioedema:** Angioedema of the face, extremities, lips, tongue, glottis, and/or larynx has been reported in patients treated with ACE inhibitors, including VASOTEC. In such cases, VASOTEC should be promptly discontinued and the patient carefully observed until the swelling disappears. In instances where swelling has been confined to the face and lips, the condition has generally resolved without treatment, although antihistamines have been useful in relieving symptoms. Angioedema associated with laryngeal edema may be fatal. **Where there is involvement of the tongue, glottis, or larynx likely to cause airway obstruction, appropriate therapy, e.g., subcutaneous epinephrine solution 1:1000 (0.3 mL to 0.5 mL), should be promptly administered.** (See ADVERSE REACTIONS.)

Hypotension: Excessive hypotension is rare in uncomplicated hypertensive patients treated with VASOTEC alone. Heart failure patients given VASOTEC commonly have some reduction in blood pressure, especially with the first dose, but discontinuation of therapy for continuing symptomatic hypotension usually is not necessary when dosing instructions are followed; caution should be observed when initiating therapy. (See DOSAGE AND ADMINISTRATION.) Patients at risk for excessive hypotension, sometimes associated with oliguria and/or progressive azotemia and rarely with acute renal failure and/or death, include those with the following conditions or characteristics: heart failure, hyponatremia, high-dose diuretic therapy, recent intensive diuresis or increase in diuretic dose, renal dialysis, or severe volume and/or salt depletion of any etiology. It may be advisable to eliminate the diuretic (except in heart failure patients), reduce the diuretic dose, or increase salt intake cautiously before initiating therapy with VASOTEC in patients at risk for excessive hypotension who are able to tolerate such adjustments. (See PRECAUTIONS, Drug Interactions and ADVERSE REACTIONS.) In patients at risk for excessive hypotension, therapy should be started under very close medical supervision and such patients should be followed closely for the first two weeks of treatment and whenever the dose of enalapril and/or diuretic is increased. Similar considerations may apply to patients with ischemic heart disease or cardiovascular disease in whom an excessive fall in blood pressure could result in a myocardial infarction or cerebrovascular accident. If excessive hypotension occurs, the patient should be placed in supine position and, if necessary, receive an intravenous infusion of normal saline. A transient hypotensive response is not a contraindication to further doses of VASOTEC, which usually can be given without difficulty once the blood pressure has stabilized. If symptomatic hypotension develops, a dose reduction or discontinuation of VASOTEC or concomitant diuretic may be necessary.

Neutropenia/Agranulocytosis: Another ACE inhibitor, captopril, has been shown to cause agranulocytosis and bone marrow depression, rarely in uncomplicated patients but more frequently in patients with renal impairment, especially if they also have a collagen vascular disease. Available data from clinical trials of enalapril are insufficient to show that enalapril does not cause agranulocytosis at similar rates. Foreign marketing experience has revealed several cases of neutropenia or agranulocytosis in which a causal relationship to enalapril cannot be excluded. Periodic monitoring of white blood cell counts in patients with collagen vascular disease and renal disease should be considered.

Precautions: **General:** **Impaired Renal Function:** As a consequence of inhibiting the renin-angiotensin-aldosterone system, changes in renal function may be anticipated in susceptible individuals. In patients with severe heart failure whose renal function may depend on the activity of the renin-angiotensin-aldosterone system, treatment with ACE inhibitors, including VASOTEC, may be associated with oliguria and/or progressive azotemia and rarely with acute renal failure and/or death.

In clinical studies in hypertensive patients with unilateral or bilateral renal artery stenosis, increases in blood urea nitrogen and serum creatinine were observed in 20% of patients. These increases were almost always reversible upon discontinuation of enalapril and/or diuretic therapy. In such patients, renal function should be monitored during the first few weeks of therapy.

Some patients with hypertension or heart failure with no apparent preexisting renal vascular disease have developed increases in blood urea and serum creatinine, usually minor and transient, especially when VASOTEC has been given concomitantly with a diuretic. This is more likely to occur in patients with preexisting renal impairment. Dosage reduction and/or discontinuation of the diuretic and/or VASOTEC may be required.

Evaluation of patients with hypertension or heart failure should always include assessment of renal function. (See DOSAGE AND ADMINISTRATION.)

Hyperkalemia: Elevated serum potassium (> 5.7 mEq/L) was observed in approximately 1% of hypertensive patients in clinical trials. In most cases these were isolated values which resolved despite continued therapy. Hyperkalemia was a cause of discontinuation of therapy in 0.28% of hypertensive patients. In clinical trials in heart failure, hyperkalemia was observed in 3.8% of patients, but was not a cause for discontinuation.

Risk factors for the development of hyperkalemia include renal insufficiency, diabetes mellitus, and the concomitant use of potassium-sparing diuretics, potassium supplements, and/or potassium-containing salt substitutes, which should be used cautiously, if at all, with VASOTEC. (See Drug Interactions.)

Surgery/Anesthesia: In patients undergoing major surgery or during anesthesia with agents that produce hypotension, enalapril may block angiotensin II formation secondary to compensatory renin release. If hypotension occurs and is considered to be due to this mechanism, it can be corrected by volume expansion.

Information for Patients:

Angioedema: Angioedema, including laryngeal edema, may occur especially following the first dose of enalapril. Patients should be so advised and told to report immediately any signs or symptoms suggesting angioedema (swelling of face, extremities, eyes, lips, tongue, difficulty in swallowing or breathing) and to take no more drug until they have consulted with the prescribing physician.

Hypotension: Patients should be cautioned to report lightheadedness especially during the first few days of therapy. If actual syncope occurs, the patients should be told to discontinue the drug until they have consulted with the prescribing physician.

All patients should be cautioned that excessive perspiration and dehydration may lead to an excessive fall in blood pressure because of reduction in fluid volume. Other causes of volume depletion such as vomiting or diarrhea may also lead to a fall in blood pressure; patients should be advised to consult with the physician.

Hyperkalemia: Patients should be told not to use salt substitutes containing potassium without consulting their physician.

Neutropenia: Patients should be told to report promptly any indication of infection (e.g., sore throat, fever) which may be a sign of neutropenia.

NOTE: As with many other drugs, certain advice to patients being treated with enalapril is warranted. This information is intended to aid in the safe and effective use of this medication. It is not a disclosure of all possible adverse or intended effects.

Drug Interactions:

Hypotension: Patients on Diuretic Therapy: Patients on diuretics and especially those in whom diuretic therapy was recently instituted may occasionally experience an excessive reduction of blood pressure after initiation of therapy with enalapril. The possibility of hypotensive effects with enalapril can be minimized by either discontinuing the diuretic or increasing the salt intake prior to initiation of treatment with enalapril. If it is necessary to continue the diuretic, provide close medical supervision after the initial dose for at least two hours and until blood pressure has stabilized for at least an additional hour. (See WARNINGS and DOSAGE AND ADMINISTRATION.)

Agents Causing Renin Release: The antihypertensive effect of VASOTEC is augmented by antihypertensive agents that cause renin release (e.g., diuretics).

Other Cardiovascular Agents: VASOTEC has been used concomitantly with beta-adrenergic-blocking agents, methyl-dopa, nitrates, calcium-blocking agents, hydralazine, prazosin, and digoxin without evidence of clinically significant adverse interactions.

Agents Increasing Serum Potassium: VASOTEC attenuates potassium loss caused by thiazide-type diuretics. Potassium-sparing diuretics (e.g., spironolactone, triamterene, or amiloride), potassium supplements, or potassium-containing salt substitutes may lead to significant increases in serum potassium. Therefore, if concomitant use of these agents is indicated because of demonstrated hypokalemia, they should be used with caution and with frequent monitoring of serum potassium. Potassium-sparing agents should generally not be used in patients with heart failure receiving VASOTEC.

Lithium: A few cases of lithium toxicity have been reported in patients receiving concomitant VASOTEC and lithium and were reversible upon discontinuation of both drugs. Although a causal relationship has not been established, it is recommended that caution be exercised when lithium is used concomitantly with VASOTEC and serum lithium levels should be monitored frequently.

Pregnancy—Category C: There was no fetotoxicity or teratogenicity in rats treated with up to 200 mg/kg/day of enalapril (333 times the maximum human dose). Fetotoxicity, expressed as a decrease in average fetal weight, occurred in rats given 1200 mg/kg/day of enalapril but did not occur when these animals were supplemented with saline. Enalapril was not teratogenic in rabbits. However, maternal and fetal toxicity occurred in some rabbits at doses of 1 mg/kg/day or more. Saline supplementation prevented the maternal and fetal toxicity seen at doses of 3 and 10 mg/kg/day, but not at 30 mg/kg/day (50 times the maximum human dose).

Radioactivity was found to cross the placenta following administration of labeled enalapril to pregnant hamsters.

There are no adequate and well-controlled studies in pregnant women. VASOTEC® (Enalapril Maleate, MSD) should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nursing Mothers: Milk in lactating rats contains radioactivity following administration of ¹⁴C enalapril maleate. It is not known whether this drug is secreted in human milk. Because many drugs are secreted in human milk, caution should be exercised when VASOTEC is given to a nursing mother.

Pediatric Use: Safety and effectiveness in children have not been established.

Adverse Reactions: VASOTEC has been evaluated for safety in more than 10,000 patients, including over 1000 patients treated for one year or more. VASOTEC has been found to be generally well tolerated in controlled clinical trials involving 2987 patients.

Hypertension: The most frequent clinical adverse experiences in controlled trials were: headache (5.2%), dizziness (4.3%), and fatigue (3%).

Other adverse experiences occurring in greater than 1% of patients treated with VASOTEC in controlled clinical trials were: diarrhea (1.4%), nausea (1.4%), cough (1.3%), orthostatic effects (1.2%), and asthenia (1.1%).

Heart Failure: The most frequent clinical adverse experiences in both controlled and uncontrolled trials were: dizziness (7.9%), hypotension (6.7%), orthostatic effects (2.2%), syncope (2.2%), cough (2.2%), chest pain (2.1%), and diarrhea (2.1%).

Other adverse experiences occurring in greater than 1% of patients treated with VASOTEC in both controlled and uncontrolled clinical trials were: fatigue (1.8%), headache (1.8%), abdominal pain (1.6%), asthenia (1.6%), orthostatic hypotension (1.6%), vertigo (1.6%), angina pectoris (1.5%), nausea (1.3%), vomiting (1.3%), bronchitis (1.3%), dyspnea (1.3%), urinary tract infection (1.3%), rash (1.3%), and myocardial infarction (1.2%).

Other serious clinical adverse experiences occurring since the drug was marketed or adverse experiences occurring in 0.5% to 1% of patients with hypertension or heart failure in clinical trials in order of decreasing severity within each category:

Cardiovascular: Myocardial infarction or cerebrovascular accident, possibly secondary to excessive hypotension in high-risk patients (see WARNINGS, Hypotension); cardiac arrest; pulmonary embolism and infarction; rhythm disturbances; atrial fibrillation; palpitation.

Digestive: Ileus, pancreatitis, hepatitis or cholestatic jaundice, melena, anorexia, dyspepsia, constipation, glossitis.

Nervous/Psychiatric: Depression, confusion, ataxia, somnolence, insomnia, nervousness, paresthesia.

Urogenital: Renal failure, oliguria, renal dysfunction (see PRECAUTIONS and DOSAGE AND ADMINISTRATION), prostate hypertrophy.

Respiratory: Bronchospasm, rhinorrhea, asthma, upper respiratory infection.

Skin: Herpes zoster, pruritus, alopecia, flushing, photosensitivity.

Other: Muscle cramps, hyperhidrosis, impotence, blurred vision, taste alteration, tinnitus.

A symptom complex has been reported which may include fever, myalgia, and arthralgia; an elevated erythrocyte sedimentation rate may be present. Rash or other dermatologic manifestations may occur. These symptoms have disappeared after discontinuation of therapy.

Angioedema: Angioedema has been reported in patients receiving VASOTEC (0.2%). Angioedema associated with laryngeal edema may be fatal. If angioedema of the face, extremities, lips, tongue, glottis, and/or larynx occurs, treatment with VASOTEC should be discontinued and appropriate therapy instituted immediately. (See WARNINGS.)

Hypotension: In the hypertensive patients, hypotension occurred in 0.9% and syncope occurred in 0.5% of patients following the initial dose or during extended therapy. Hypotension or syncope was a cause for discontinuation of therapy in 0.1% of hypertensive patients. In heart failure patients, hypotension occurred in 6.7% and syncope occurred in 2.2% of patients. Hypotension or syncope was a cause for discontinuation of therapy in 1.9% of patients with heart failure. (See WARNINGS.)

Clinical Laboratory Test Findings:

Serum Electrolytes: Hyperkalemia (see PRECAUTIONS), hyponatremia.

Creatinine, Blood Urea Nitrogen: In controlled clinical trials, minor increases in blood urea nitrogen and serum creatinine, reversible upon discontinuation of therapy, were observed in about 0.2% of patients with essential hypertension treated with VASOTEC alone. Increases are more likely to occur in patients receiving concomitant diuretics or in patients with renal artery stenosis. (See PRECAUTIONS.) In patients with heart failure who were also receiving diuretics with or without digitalis, increases in blood urea nitrogen or serum creatinine, usually reversible upon discontinuation of VASOTEC and/or other concomitant diuretic therapy, were observed in about 11% of patients. Increases in blood urea nitrogen or creatinine were a cause for discontinuation in 1.2% of patients.

Hemoglobin and Hematocrit: Small decreases in hemoglobin and hematocrit (mean decreases of approximately 0.3 g and 1.0 vol %, respectively) occur frequently in either hypertension or heart failure patients treated with VASOTEC but are rarely of clinical importance unless another cause of anemia coexists. In clinical trials, less than 0.1% of patients discontinued therapy due to anemia.

Other (Causal Relationship Unknown): In marketing experience, rare cases of neutropenia, thrombocytopenia, and bone marrow depression have been reported.

Liver Function Tests: Elevations of liver enzymes and/or serum bilirubin have occurred.

Dosage and Administration: **Hypertension:** In patients who are currently being treated with a diuretic, symptomatic hypotension occasionally may occur following the initial dose of VASOTEC. The diuretic should, if possible, be discontinued for two to three days before beginning therapy with VASOTEC to reduce the likelihood of hypotension. (See WARNINGS.) If the patient's blood pressure is not controlled with VASOTEC alone, diuretic therapy may be resumed.

If the diuretic cannot be discontinued, an initial dose of 2.5 mg should be used under medical supervision for at least two hours and until blood pressure has stabilized for at least an additional hour. (See WARNINGS and PRECAUTIONS, Drug Interactions.)

The recommended initial dose in patients not on diuretics is 5 mg once a day. Dosage should be adjusted according to blood pressure response. The usual dosage range is 10 to 40 mg per day administered in a single dose or in two divided doses. In some patients treated once daily, the antihypertensive effect may diminish toward the end of the dosing interval. In such patients, an increase in dosage or twice-daily administration should be considered. If blood pressure is not controlled with VASOTEC alone, a diuretic may be added.

Concomitant administration of VASOTEC with potassium supplements, potassium salt substitutes, or potassium-sparing diuretics may lead to increases of serum potassium (see PRECAUTIONS).

Dosage Adjustment in Hypertensive Patients with Renal Impairment: The usual dose of enalapril is recommended for patients with a creatinine clearance >30 mL/min (serum creatinine <1.6 mg/dL). For patients with creatinine clearance <30 mL/min (serum creatinine >1.6 mg/dL), the first dose is 2.5 mg once daily. The dosage may be titrated upward until blood pressure is controlled or to a maximum of 40 mg daily.

Heart Failure: VASOTEC is indicated as adjunctive therapy with diuretics and digitalis. The recommended starting dose is 2.5 mg once or twice daily. After the initial dose of VASOTEC, the patient should be observed under medical supervision for at least two hours and until blood pressure has stabilized for at least an additional hour. (See WARNINGS and PRECAUTIONS, Drug Interactions.) If possible, the dose of the diuretic should be reduced, which may diminish the likelihood of hypotension. The appearance of hypotension after the initial dose of VASOTEC does not preclude subsequent careful dose titration with the drug, following effective management of the hypotension. The usual therapeutic dosing range for the treatment of heart failure is 5 to 20 mg daily given in two divided doses. The maximum daily dose is 40 mg. Once-daily dosing has been effective in a controlled study, but nearly all patients in this study were given 40 mg, the maximum recommended daily dose, and there has been much more experience with twice-daily dosing. In addition, in a placebo-controlled study which demonstrated reduced mortality in patients with severe heart failure (NYHA Class IV), patients were treated with 2.5 to 40 mg per day of VASOTEC, almost always administered in two divided doses. (See CLINICAL PHARMACOLOGY, Pharmacodynamics and Clinical Effects.) Dosage may be adjusted depending upon clinical or hemodynamic response. (See WARNINGS.)

Dosage Adjustment in Heart Failure Patients with Renal Impairment or Hyponatremia: In heart failure patients with hyponatremia (serum sodium <130 mEq/L) or with serum creatinine >1.6 mg/dL, therapy should be initiated at 2.5 mg daily under close medical supervision. (See DOSAGE AND ADMINISTRATION, Heart Failure, WARNINGS, and PRECAUTIONS, Drug Interactions.) The dose may be increased to 2.5 mg b.i.d., then 5 mg b.i.d. and higher as needed, usually at intervals of four days or more, if at the time of dosage adjustment there is not excessive hypotension or significant deterioration of renal function. The maximum daily dose is 40 mg.

YOU CAN REACH THE GREEN FASTER WITH SCPIE'S NEW AGE 55 RETIREMENT PLAN

When the urge to escape grows strong, and you yearn for the relaxation you've earned, SCPIE's retirement plan can provide the reassurance you're looking for.

A SCPIE member who has been insured for five years immediately prior to retirement, and who quits practice completely and permanently, can retire at age 55 or thereafter with no "tail" cost.

Of course, that's only one advantage of joining an A+ rated, policyholder-owned insurance company. Many doctors join because they appreciate the other benefits which SCPIE offers.

For instance, SCPIE's policy provides broader coverage, giving you greater peace of mind than many other plans. As a doctor-owned company, we do not look for loopholes (exclusions) that save money but leave our members short-changed when it comes to protection.

Premiums are set by doctors on the SCPIE Board of Governors who pay those premiums themselves. They strive to hold costs as low as possible, while keeping SCPIE strong and solvent. If premiums turn out to be more than needed to pay claims and costs, the excess is returned.

SCPIE is on top of the leader board. It's worth a call to find out what we can do for your retirement game.

Sponsored by the Medical Associations and Societies of Kern, Los Angeles, Orange, Riverside, San Bernardino, San Luis Obispo, Santa Barbara and Ventura Counties. Available in other areas. Also sponsored by The California Association of Oral and Maxillofacial Surgeons.

cimetidine
400 mg hs (n = 241)

63%

*P = 0.01 †P = 0.0004 % life-table estimates

All patients were permitted prn antacids for relief of pain.
Adapted from Silvis¹ and Gough.²

These two trials^{1,2} used the currently recommended dosing regimen of cimetidine (400 mg hs) and ranitidine (150 mg hs). A comparison of other dosing regimens has not been studied.

The studied dosing regimens are not equivalent with respect to the degree and duration of acid suppression or suppression of nocturnal acid.

The superiority of ranitidine over cimetidine in these trials indicates that the dosing regimen currently recommended for cimetidine is less likely to be as successful in maintenance therapy.

TRANDATE® Tablets (labetalol hydrochloride)

BRIEF SUMMARY

The following is a brief summary only. Before prescribing, see complete prescribing information in TRANDATE® Tablets product labeling.

CONTRAINDICATIONS: TRANDATE® Tablets are contraindicated in bronchial asthma, overt cardiac failure, greater-than-first-degree heart block, cardiogenic shock, and severe bradycardia (see WARNINGS).

WARNINGS: **Cardiac Failure:** Sympathetic stimulation is a vital component supporting circulatory function in congestive heart failure. Beta-blockade carries a potential hazard of further depressing myocardial contractility and precipitating more severe failure. Although beta-blockers should be avoided in overt congestive heart failure, if necessary, labetalol HCl can be used with caution in patients with a history of heart failure who are well compensated. Congestive heart failure has been observed in patients receiving labetalol HCl. Labetalol HCl does not abolish the inotropic action of digitalis on heart muscle.

In Patients Without a History of Cardiac Failure: In patients with latent cardiac insufficiency, continued depression of the myocardium with beta-blocking agents over a period of time can, in some cases, lead to cardiac failure. At the first sign or symptom of impending cardiac failure, patients should be fully digitalized and/or be given a diuretic, and the response should be observed closely. If cardiac failure continues despite adequate digitalization and diuretic, TRANDATE® therapy should be withdrawn (gradually, if possible).

Exacerbation of Ischemic Heart Disease Following Abrupt Withdrawal: Angina pectoris has not been reported upon labetalol HCl discontinuation. However, hypersensitivity to catecholamines has been observed in patients withdrawn from beta-blocker therapy; exacerbation of angina and, in some cases, myocardial infarction have occurred after abrupt discontinuation of such therapy. When discontinuing chronically administered TRANDATE, particularly in patients with ischemic heart disease, the dosage should be gradually reduced over a period of one to two weeks and the patient should be carefully monitored. If angina markedly worsens or acute coronary insufficiency develops, TRANDATE administration should be reinstituted promptly, at least temporarily, and other measures appropriate for the management of unstable angina should be taken. Patients should be warned against interruption or discontinuation of therapy without the physician's advice. Because coronary artery disease is common and may be unrecognized, it may be prudent not to discontinue TRANDATE therapy abruptly even in patients treated only for hypertension.

Nonallergic Bronchospasm (eg, Chronic Bronchitis and Emphysema): Patients with bronchospastic disease should, in general, not receive beta-blockers. TRANDATE may be used with caution, however, in patients who do not respond to, or cannot tolerate, other antihypertensive agents. It is prudent, if TRANDATE is used, to use the smallest effective dose, so that inhibition of endogenous or exogenous beta-agonists is minimized.

Phaeochromocytoma: Labetalol HCl has been shown to be effective in lowering blood pressure and relieving symptoms in patients with pheochromocytoma. However, paradoxical hypertensive responses have been reported in a few patients with this tumor; therefore, use caution when administering labetalol HCl to patients with pheochromocytoma.

Diabetes Mellitus and Hypoglycemia: Beta-adrenergic blockade may prevent the appearance of premonitory signs and symptoms (eg, tachycardia) of acute hypoglycemia. This is especially important with labile diabetics. Beta-blockade also reduces the release of insulin in response to hyperglycemia; it may therefore be necessary to adjust the dose of antidiabetic drugs.

Major Surgery: The necessity or desirability of withdrawing beta-blocking therapy before major surgery is controversial. Prolonged severe hypotension and difficulty in restarting or maintaining a heartbeat have been reported with beta-blockers. The effect of labetalol HCl's alpha-adrenergic activity has not been evaluated in this setting.

A synergism between labetalol HCl and halothane anesthesia has been shown (see PRECAUTIONS: Drug Interactions).

PRECAUTIONS: General: **Impaired Hepatic Function:** TRANDATE® Tablets should be used with caution in patients with impaired hepatic function since metabolism of the drug may be diminished.

Jaundice or Hepatic Dysfunction: On rare occasions, labetalol HCl has been associated with jaundice (both hepatic and cholestatic). It is therefore recommended that treatment with labetalol HCl be stopped immediately should a patient develop jaundice or laboratory evidence of liver injury. Both have been shown to be reversible on stopping therapy.

Information for Patients: As with all drugs with beta-blocking activity, certain advice to patients being treated with labetalol HCl is warranted. This information is intended to aid in the safe and effective use of this medication. It is not a disclosure of all possible adverse or intended effects. While no incidence of the abrupt withdrawal phenomenon (exacerbation of angina pectoris) has been reported with labetalol HCl, dosing with TRANDATE Tablets should not be interrupted or discontinued without a physician's advice. Patients being treated with TRANDATE Tablets should consult a physician at any sign of impending cardiac failure. Also, transient scalp tingling may occur, usually when treatment with TRANDATE Tablets is initiated (see ADVERSE REACTIONS).

Laboratory Tests: As with any new drug given over prolonged periods, laboratory parameters should be observed over regular intervals. In patients with concomitant illnesses, such as impaired renal function, appropriate tests should be done to monitor these conditions.

Drug Interactions: In one survey, 2.3% of patients taking labetalol HCl in combination with tricyclic antidepressants experienced tremor as compared to 0.7% reported to occur with labetalol HCl alone. The contribution of each of the treatments to this adverse reaction is unknown, but the possibility of a drug interaction cannot be excluded.

Drugs possessing beta-blocking properties can blunt the bronchodilator effect of beta-receptor agonist drugs in patients with bronchospasm; therefore, doses greater than the normal antihistaminic dose of beta-agonist bronchodilator drugs may be required.

Cimetidine has been shown to increase the bioavailability of labetalol HCl. Since this could be explained either by enhanced absorption or by an alteration of hepatic metabolism of labetalol HCl, special care should be used in establishing the dose required for blood pressure control in such patients.

Synergism has been shown between halothane anesthesia and intravenously administered labetalol HCl. During controlled hypotensive anesthesia using labetalol HCl in association with halothane, high concentrations (3% or above) of halothane should not be used because the degree of hypotension will

TRANDATE® (labetalol hydrochloride) Tablets

be increased and because of the possibility of a large reduction in cardiac output and an increase in central venous pressure. The anesthesiologist should be informed when a patient is receiving labetalol HCl.

Labetalol HCl blunts the reflex tachycardia produced by nitroglycerin without preventing its hypotensive effect. If labetalol HCl is used with nitroglycerin in patients with angina pectoris, additional antihypertensive effects may occur.

Drug/Laboratory Test Interactions: The presence of a metabolite of labetalol in the urine may result in falsely increased levels of urinary catecholamines when measured by a nonspecific trihydroxyindole (THI) reaction. In screening patients suspected of having a pheochromocytoma and being treated with labetalol HCl, specific radioenzymatic or high performance liquid chromatography assay techniques should be used to determine levels of catecholamines or their metabolites.

Carcinogenesis, Mutagenesis, Impairment of Fertility: Long-term oral dosing studies with labetalol HCl for 18 months in mice and for two years in rats showed no evidence of carcinogenesis. Studies with labetalol HCl using dominant lethal assays in rats and mice and exposing microorganisms according to modified Ames tests showed no evidence of mutagenesis.

Pregnancy: Teratogenic Effects: Pregnancy Category C: Teratogenic studies were performed with labetalol in rats and rabbits at oral doses up to approximately six and four times the maximum recommended human dose (MRHD), respectively. No reproducible evidence of fetal malformations was observed. Increased fetal resorptions were seen in both species at doses approximating the MRHD. A teratology study performed with labetalol in rabbits at intravenous doses up to 1.7 times the MRHD revealed no evidence of drug-related harm to the fetus. There are no adequate and well-controlled studies in pregnant women. Labetalol should be used during pregnancy only if the potential benefit justifies the potential risk to the fetus.

Nonteratogenic Effects: Infants of mothers who were treated with labetalol HCl during pregnancy did not appear to be adversely affected by the drug. Oral administration of labetalol to rats during late gestation through weaning at doses of two to four times the MRHD caused a decrease in neonatal survival.

Labor and Delivery: Labetalol HCl given to pregnant women with hypertension did not appear to affect the usual course of labor and delivery.

Nursing Mothers: Small amounts of labetalol (approximately 0.004% of the maternal dose) are excreted in human milk. Caution should be exercised when TRANDATE Tablets are administered to a nursing woman.

Pediatric Use: Safety and effectiveness in children have not been established.

ADVERSE REACTIONS: Most adverse effects are mild, transient, and occur early in the course of treatment. In controlled clinical trials of three to four months' duration, discontinuation of TRANDATE® Tablets due to one or more adverse effects was required in 7% of all patients. In these same trials, beta-blocker control agents led to discontinuation in 8% to 10% of patients, and a centrally acting alpha-agonist in 30% of patients.

The following adverse reactions were derived from multicenter, controlled clinical trials over treatment periods of three and four months. The rates, which ranged from less than 1% to 5% except as otherwise noted, are based on adverse reactions considered probably drug-related by the investigator. If all reports are considered, the rates are somewhat higher (eg, dizziness, 20%; nausea, 14%; fatigue, 11%).

Body as a Whole: Fatigue, asthenia, headache. **Gastrointestinal:** Nausea (6%), vomiting, dyspepsia, diarrhea, taste distortion. **Central and Peripheral Nervous Systems:** Dizziness (11%), paresthesia, drowsiness. **Autonomic Nervous System:** Nasal stuffiness, ejaculation failure, impotence, increased sweating. **Cardiovascular:** Edema, postural hypotension. **Respiratory:** Dyspnea. **Skin:** Rash. **Special Senses:** Vision abnormality, vertigo.

The adverse effects were reported spontaneously and are representative of the incidence of adverse effects that may be observed in a properly selected hypertensive patient population, ie, a group excluding patients with bronchospastic disease, overt congestive heart failure, or other contraindications to beta-blocker therapy.

Clinical trials also included studies utilizing daily doses up to 2,400 mg in more severely hypertensive patients. The US therapeutic trials data base for adverse reactions that are clearly or possibly dose-related shows that the following side effects increased with increasing dose: dizziness, fatigue, nausea, vomiting, dyspepsia, paresthesia, nasal stuffiness, ejaculation failure, impotence, and edema.

In addition, a number of other less common adverse events have been reported in clinical trials or the literature:

Cardiovascular: Postural hypotension, including, rarely, syncope. **Central and Peripheral Nervous Systems:** Paresthesia, most frequently described as scalp tingling. In most cases, it was mild, transient, and usually occurred at the beginning of treatment. **Collagen Disorders:** Systemic lupus erythematosus; positive antinuclear factor (ANF). **Eyes:** Dry eyes. **Immunological System:** Antimitochondrial antibodies. **Liver and Biliary System:** Cholestasis with or without jaundice. **Musculoskeletal System:** Muscle cramps, toxic myopathy. **Respiratory System:** Bronchospasm. **Skin and Appendages:** Rashes of various types, such as generalized maculopapular, lichenoid, urticarial, bullous lichen planus, psoriasis, and facial erythema; Peyronie's disease; reversible alopecia. **Urinary System:** Difficulty in micturition, including acute urinary bladder retention.

Following approval for marketing in the United Kingdom, a monitored release survey involving approximately 6,800 patients was conducted for further safety and efficacy evaluation of this product. Results of this survey indicate that the type, severity, and incidence of adverse effects were comparable to those cited above.

Potential Adverse Effects: In addition, other adverse effects not listed above have been reported with other beta-adrenergic blocking agents. **Central Nervous System:** Reversible mental depression progressing to catatonia, an acute reversible syndrome characterized by disorientation for time and place, short-term memory loss, emotional lability, slightly clouded sensorium, and decreased performance on psychometrics. **Cardiovascular:** Intensification of AV block (see CONTRAINDICATIONS). **Allergic:** Fever combined with aching and sore throat; laryngospasm, respiratory distress. **Hematologic:** Agranulocytosis, thrombocytopenic or nonthrombocytopenic purpura. **Gastrointestinal:** Mesenteric artery thrombosis, ischemic colitis. The oculomucocutaneous syndrome associated with the beta-blocker practolol has not been reported with labetalol HCl.

Clinical Laboratory Tests: There have been reversible increases of serum transaminases in 4% of patients treated with labetalol HCl and tested, and, more rarely, reversible increases in blood urea.

OVERDOSAGE: Information concerning possible overdosage and its treatment appears in the full prescribing information.

DOSAGE AND ADMINISTRATION: DOSAGE MUST BE INDIVIDUALIZED. The recommended initial dosage is 100 mg twice daily whether used alone or added to a diuretic regimen. After two or three days, using standing blood pressure as an indicator, dosage may be titrated in increments of 100 mg bid every two or three days. The usual maintenance dosage of labetalol HCl is between 200 and 400 mg twice daily. Before use, see complete prescribing information for dosage details.

CALIFORNIA MEDICAL ASSOCIATION

PRESENTS

118TH ANNUAL SESSION AND

Western Scientific Assembly

MARCH 3-8, 1989

DISNEYLAND HOTEL • ANAHEIM

WESTERN SCIEN

GOLDEN APPLE AWARD

Rene Cailliet, MD

Rene Cailliet, MD, Director of Rehabilitation Services at the Santa Monica Hospital Medical Center, has been selected by the Committee on Scientific Assemblies to receive CMA's 1989 Golden Apple Award.

This award spotlights exceptional physicians who have made a lifelong commitment to teaching and are renowned for their charismatic, scientific and educational talents. Doctor Cailliet held the post of Chairman, Department of Rehabilitation Medicine at USC from 1972-1982, and is currently professor emeritus of rehabilitation medicine; he is also the author of seven books on pain.

The award will be presented following Doctor Cailliet's presentation, "**Conservative Management of Low Back Pain.**" All are invited to attend. Come hear an outstanding teacher address a subject of interest to all physicians.

Conservative Management of Low Back Pain
Friday, March 3, 12:30 pm
Disneyland Hotel

California Medical Association's 1989 Western Scientific Assembly will be held March 3-8 at the Disneyland Hotel. Persons attending scientific courses or special conferences are asked to register on site in the Center Lounge, located in the foyer outside the Grand Ballroom of the Disneyland Hotel. For more information on the following programs, please contact CMA at (415) 541-0900.

THURSDAY, MARCH 2

- ☐ Basic Cardiac Life Support

FRIDAY, MARCH 3

- ☐ Advanced Cardiac Life Support: Certification
- ☐ Clinical Applications of Environmental Epidemiology
- ☐ Managing HIV Infection
- ☐ Neurology Update for the Primary Care Physician
- ☐ Sports Medicine: Working With the Weekend Warrior
- ☐ Occupational Medicine Controversies
- ☐ New Perceptions in Treating Cerebral Palsy
- ☐ Pulmonary Medicine in Your Office
- ☐ Current Trends in Emergency Medicine and Prehospital Care
- ☐ Clinical Cardiology for the Primary Care Physician

SATURDAY, MARCH 4

- ☐ Advanced Cardiac Life Support: Recertification
 - ☐ Fine Needle Aspiration Biopsy
 - ☐ Lumbago 1989
 - ☐ Controversies in Dermatology
 - ☐ Women's Health Care Issues in Family Medicine
 - ☐ Rheumatoid Arthritis
 - ☐ Update in Ophthalmology
-

IFIC ASSEMBLY

- ☐ Advances in Pediatrics
- ☐ A Workshop on Residency Selection and Career Planning
- ☐ Preoperative Fluid, Electrolyte and Blood Transfusion Management
- ☐ Multidisciplinary Approach to Biliary Stone Disease
- ☐ Physician Lifestyles: There's Gotta Be a Pony in Here Somewhere
- ☐ The Role of Modern Psychopharmacology
- ☐ Investment Planning

SUNDAY, MARCH 5

- ☐ Skin Cancer Update
- ☐ Colorectal Cancer Workshop - Flexible Sigmoidoscopy
- ☐ Pediatric Allergy - New Perspectives
- ☐ What's New? Keeping Up-To-Date in Obstetrics and Gynecology
- ☐ Update on Sexually Transmitted Diseases
- ☐ Update on the Tobacco Revolution
- ☐ Urology Update for the Primary Care Physician
- ☐ Legal Problems of Impaired Physicians
- ☐ Diagnosis and Management of Vertigo and Sleep Disorders
- ☐ Molehills or Mountains?
- ☐ Physicians and the Law
- ☐ CMA Takes a Look at the Washington Scene
- ☐ Magic Machines: Making Computers Work For You

MONDAY, MARCH 6

- ☐ Senior Health Care Seminar
- ☐ Suture Course
- ☐ Current Update on the Management of Breast Cancer

WESTERN SCIENTIFIC ASSEMBLY KEYNOTE SPEAKER

Willard Gaylin, MD

A noted ethicist, psychiatrist and psychoanalyst, Doctor Gaylin is co-founder and president of The Hastings Center in New York state, which is engaged in research on ethical issues in

the life sciences. He is also a clinical professor of psychiatry at Columbia University's College of Physicians and Surgeons and author of many books, the latest of which is *The Rage Within: Anger in Modern Life*.

Many of the knotty legal, moral, and ethical problems associated with biomedical advances are special concerns of Doctor Gaylin. The Center's staff members and fellows are engaged in examining and evaluating issues involving population control, genetic screening, recombinant DNA research, behavior control, health policy, and the pros and cons of living wills.

The Burdens of Biomedical Success: After All We've Done for Them...

Sunday, March 5, 12:15 p.m. Disneyland Hotel

THE 118TH ANNUAL SESSION

AND WESTERN SCIENTIFIC ASSEMBLY

CONCURRENT EVENTS

HOUSE OF DELEGATES

The CMA House of Delegates meets Saturday, March 4 through Wednesday, March 8 at the Disneyland Hotel. Sit in on reference committee hearings and House sessions to see firsthand how CMA policies are shaped. Highlights of this year's House will be the farewell address of out-going CMA President Dr. Laurens P. White, a San Francisco internist, and the inaugural address of CMA's President-Elect, Dr. William G. Plested, a Los Angeles cardiovascular surgeon. Registration will be available March 3-8 at the Disneyland Hotel.

HOSPITAL MEDICAL STAFF SECTION ANNUAL ASSEMBLY

The CMA-HMSS Annual Assembly will be Friday, March 3 at the Disneyland Hotel. The theme of this year's assembly will be "Medical Staff Issues: 1989."

SPECIAL EVENTS

A variety of special events will be offered this year. Registration takes place at the Disneyland Hotel.

- ☐ Huntington Library, Art Gallery and Botanical Gardens
- ☐ Rags to Riches (Garment District to Beverly Hills)
- ☐ Newport Harbor Cruise/Dinner
- ☐ Gump's Presents Gems in General
- ☐ Laguna Impressions and High Tea at the Ritz Carlton
- ☐ Family Day at Disneyland

EXHIBITS

The exhibit hall offers something for everyone: pharmaceutical displays, computer and office systems, medical testing systems, insurance, investment opportunities, and much more. Prizes!

GENERAL INFORMATION

LOCATION

The CMA 1989 Western Scientific Assembly will be held at the Disneyland Hotel, 1150 West Cerritos Avenue, Anaheim, CA 92802. Call (714) 778-6600 for hotel reservation information.

FEES

There is no charge to CMA members and their non-physician family members and guests for general registration, nor to registered nurses, residents, interns or medical students. A general registration fee of \$300 is charged to non-member physicians. Nonmember fee can be applied towards first year CMA membership dues.

REGISTRATION

Advance registration closes February 10, 1989. Attendees may register on site at the Disneyland Hotel's Center Lounge. Registration will be open:

Thursday, March 2	1:00 pm to 5:00 pm
Friday, March 3	7:30 am to 5:00 pm
Saturday, March 4	7:00 am to 5:00 pm
Sunday, March 5	7:30 am to 5:00 pm
Monday, March 6	7:30 am to 4:00 pm

The registration desk will move to the House registration area outside the Marina Ballroom:

Tuesday, March 7	9:00 am to 4:00 pm
Wednesday, March 8	9:00 am to 12:00 noon

ANY QUESTIONS?

Contact CMA, (415) 541-0900.

Where do you go when you need to know more about your senior patients?

We'll take good care of you.

Coming in the next issue:

- Alzheimer's disease: What do we know now?
- What to do for congestive heart failure
- Do senior patients need to stop smoking?
- How lab values for older patients vary from normal

Read Every Issue from Cover to Cover!

TAGAMET® (brand of cimetidine)

See complete prescribing information in SK&F LAB CO. literature or PDR. The following is a brief summary.

Contraindications: 'Tagamet' is contraindicated for patients known to have hypersensitivity to the product.

Precautions: Rare instances of cardiac arrhythmias and hypotension have been reported following the rapid administration of 'Tagamet' HCl (brand of cimetidine hydrochloride) Injection by intravenous bolus. Symptomatic response to 'Tagamet' therapy does not preclude the presence of a gastric malignancy. There have been rare reports of transient healing of gastric ulcers despite subsequently documented malignancy. Reversible confusional states have been observed on occasion, predominantly in severely ill patients.

'Tagamet' has been reported to reduce the hepatic metabolism of warfarin-type anticoagulants, phenytoin, propranolol, chlorthalidone, diazepam, certain tricyclic antidepressants, lidocaine, theophylline and metronidazole. Clinically significant effects have been reported with the warfarin anticoagulants; therefore, close monitoring of prothrombin time is recommended, and adjustment of the anticoagulant dose may be necessary when 'Tagamet' is administered concomitantly. Interaction with phenytoin, lidocaine and theophylline has also been reported to produce adverse clinical effects.

However, a crossover study in healthy subjects receiving either 'Tagamet' 300 mg. q.i.d. or 800 mg. h.s. concomitantly with a 300 mg. b.i.d. dosage of theophylline (Theo-Dur®, Key Pharmaceuticals, Inc.) demonstrated less alteration in steady-state theophylline peak serum levels with the 800 mg. h.s. regimen, particularly in subjects aged 54 years and older. Data beyond ten days are not available. (Note: All patients receiving theophylline should be monitored appropriately, regardless of concomitant drug therapy.)

In a 24-month toxicity study in rats, at dose levels approximately 8 to 48 times the recommended human dose, benign Leydig cell tumors were seen. These were common in both the treated and control groups, and the incidence became significantly higher only in the aged rats receiving 'Tagamet'.

A weak antiandrogenic effect has been demonstrated in animals. In human studies, 'Tagamet' has been shown to have no effect on spermatogenesis, sperm count, motility, morphology or in vitro fertilizing capacity.

Pregnancy Category B: Reproduction studies have been performed in rats, rabbits and mice at doses up to 40 times the normal human dose and have revealed no evidence of impaired fertility or harm to the fetus due to 'Tagamet'. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproductive studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

Lack of experience to date precludes recommending 'Tagamet' for use in children under 16 unless anticipated benefits outweigh potential risks; generally, nursing should not be undertaken by patients taking the drug since cimetidine is secreted in human milk.

Adverse Reactions: Diarrhea, dizziness, somnolence, headache. Reversible confusional states (e.g., mental confusion, agitation, psychosis, depression, anxiety, hallucinations, disorientation), predominantly in severely ill patients, have been reported. Reversible impotence in patients with pathological hypersecretory disorders receiving 'Tagamet', particularly in high doses, for at least 12 months, has been reported. The incidence of impotence in large-scale surveillance studies at regular doses has not exceeded that commonly reported in the general population. Gynecomastia has been reported in patients treated for one month or longer. Decreased white blood cell counts in 'Tagamet'-treated patients (approximately 1 per 100,000 patients), including agranulocytosis (approximately 3 per million patients), have been reported, including a few reports of recurrence on challenge. Most of these reports were in patients who had serious concomitant illnesses and received drugs and/or treatment known to produce neutropenia. Thrombocytopenia (approximately 3 per million patients) and, very rarely, cases of aplastic anemia have also been reported. Increased serum transaminase has been reported. Reversible adverse hepatic effects, cholestatic or mixed cholestatic-hepatocellular in nature, have been reported rarely. Because of the predominance of cholestatic features, severe parenchymal injury is considered highly unlikely. A single case of biopsy-proven periportal hepatic fibrosis in a patient receiving 'Tagamet' has been reported. Increased plasma creatinine has been reported. Rare cases of fever, interstitial nephritis, urinary retention, pancreatitis and allergic reactions, including anaphylaxis and hypersensitivity vasculitis, have been reported. Rare cases of bradycardia, tachycardia and A-V heart block have been reported with H₂-receptor antagonists. Reversible arthralgia, myalgia and exacerbation of joint symptoms in patients with preexisting arthritis have been reported rarely. Rare cases of polymyositis have been reported, but no causal relationship has been established. Mild rash and, very rarely, cases of severe generalized skin reactions (e.g., Stevens-Johnson syndrome, epidermal necrolysis, erythema multiforme, exfoliative dermatitis and generalized exfoliative erythroderma) have been reported with H₂-receptor antagonists. Reversible alopecia has been reported very rarely.

How Supplied: Tablets: 200 mg. tablets in bottles of 100; 300 mg. tablets in bottles of 100 and Single Unit Packages of 100 (intended for institutional use only); 400 mg. tablets in bottles of 60 and Single Unit Packages of 100 (intended for institutional use only); and 800 mg. Tiltab® tablets in bottles of 30 and Single Unit Packages of 100 (intended for institutional use only).

Liquid: 300 mg./5 mL., in 8 fl. oz. (237 mL.) amber glass bottles and in single-dose units (300 mg./5 mL.), in packages of 10 (intended for institutional use only).

Injection:

Vials: 300 mg./2 mL. in single-dose vials, in packages of 10 and 30, and in 8 mL. multiple-dose vials, in packages of 10 and 25.

Prefilled Syringes: 300 mg./2 mL. in single-dose prefilled disposable syringes.

Single-Dose Premixed Plastic Containers: 300 mg. in 50 mL. of 0.9% Sodium Chloride in single-dose plastic containers, in packages of 4 units. No preservative has been added.

Exposure of the premixed product to excessive heat should be avoided. It is recommended the product be stored at controlled room temperature. Brief exposure up to 40°C does not adversely affect the premixed product.

ADD-Vantage® • Vials: 300 mg./2 mL. in single-dose ADD-Vantage® Vials, in packages of 25.

'Tagamet' HCl (brand of cimetidine hydrochloride) Injection premixed in single-dose plastic containers is manufactured for SK&F Lab Co. by Baxter Healthcare Corporation, Deerfield, IL 60015.

* ADD-Vantage® is a trademark of Abbott Laboratories.

American College of Physicians 70th Annual Session

Pre-Session Courses: Taking Control of Developments in Medicine

- ◀ **Clinical Decision Analysis in Practice: An Intermediate Course**
- ◀ **Critical Care Medicine: 1989**
- ◀ **Important Topics in Infectious Diseases**

Clinical Decision Analysis in Practice: An Intermediate Course

Tuesday, April 11, and Wednesday, April 12
Meridien Hotel, Sauternes II

This 2-day course is designed for physicians with some familiarity with clinical decision analysis who desire to hone their skills. Both lectures and small-group sessions will review basic principles, including design of decision trees; calculation of expected utilities; sensitivity analysis; use of Bayes rule; and interpretation of analytic results. More advanced topics will also be addressed, including: receiver-operator curve (ROC) analysis; Markov state-transition models of prognosis; estimation of life expectancy; acquisition of utilities from patients; risk analysis; and cost-effectiveness analysis.

Participants will have access to micro-computers and appropriate software during the small group-sessions and will actually design and analyze a decision problem themselves. In one "tree clinic" session, participants will criticize and modify decision models developed by other clinicians or their colleagues in the course.

Director:

Stephen G. Pauker, FACP, Professor of Medicine, Tufts University School of Medicine; Chief, Division of Clinical Decision Making, New England Medical Center, Boston

Faculty:

Mark Eckman, ACP Member, Assistant Professor of Medicine, Tufts University School of Medicine; Division of Medical Information Sciences, New England Medical Center, Boston

Jerome P. Kassirer, FACP, Sarah Murray Jordan Professor and Associate Chairman, Department of Medicine, Tufts University School of Medicine, Boston

Frank Sonnenberg, ACP Member, Assistant Professor of Medicine, Tufts University School of Medicine; Division of Medical Information Sciences, New England Medical Center, Boston

John Wong, ACP Associate, Assistant Professor of Medicine, Tufts University School of Medicine; Division of Clinical Decision Making, New England Medical Center, Boston

Critical Care Medicine: 1989

Tuesday, April 11, and Wednesday, April 12
Fairmont Hotel, Grand Ballroom

This 2-day course will provide an overview of critical care medicine. Diagnosis and new concepts in disease management will be discussed. Specific areas to be covered include new modes of mechanical ventilation and an update on the adult respiratory distress syndrome, management of life-threatening infections, infection control and new antibiotics in the intensive care unit, head trauma and spinal cord injury, management of sepsis, management of status asthmaticus and status epilepticus, AIDS in the intensive care unit, withholding and withdrawing life support, nutrition, endocrine crises, management of cardiogenic shock and cardiac arrhythmias, and treatment of acute bleeding disorders.

Director:

Thomas A. Raffin, FACP, Assistant Chief and Associate Professor of Medicine, (Acting Chief, Division of Respiratory Medicine), Stanford University School of Medicine, Stanford

Faculty:

Frank B. Cerra, MD, Professor of Surgery, Director of Critical Care and Metabolic Support Services, University of Minnesota School of Medicine, Minneapolis

Lawrence Crapo, FACP, Chief of Endocrinology, Santa Clara Valley Medical Center; Assistant Professor of Medicine, Division of Gerontology and Endocrinology, Stanford University School of Medicine, Stanford

Steven R. Duncan, MD, Assistant Professor of Medicine (Respiratory), Stanford University School of Medicine, Stanford

Judith A. Luce, MD, Assistant Clinical Professor of Medicine, Chief, In-Patient Oncology Service, University of California, San Francisco; San Francisco General Hospital, San Francisco

Dennis G. Maki, FACP, Professor of Medicine, Head, Section of Infectious Diseases, University of Wisconsin School of Medicine, Madison

Michael A. Matthay, FACP, Associate Professor of Medicine, Associate Director of Intensive Care, University of California, San Francisco
Mark C. Rogers, MD, Professor and Chairman, Department of Anesthesiology and Critical Care Medicine, Johns Hopkins School of Medicine, Baltimore
Lowell Young, FACP, Director of Kuzell Institute for Arthritis and Infectious Diseases; Chief, Division of Infectious Diseases, San Francisco

Important Topics in Infectious Diseases

Tuesday, April 11, and Wednesday, April 12
 Meridien Hotel, Cabernet Ballroom

The latest insights on infectious diseases and modes of treatment will be presented. Topics of discussion will include a review of infectious diseases, updates and panel discussions on viral and fungal chemotherapy, urinary tract infections, gonorrhea and chlamydial infections, newer diseases and antibiotics and gram-negative sepsis. Discussions of AIDS and HIV infections will include the evolution of the epidemic, epidemiology, pathophysiology of HIV infection, antiviral therapy, malignant complications, opportunistic infections, and *Pneumocystis carinii* pneumonia.

Directors:

Introducing MediScan.TM

A Stroke of Genius for Patient Billings.

MediScan is a revolutionary new bar code entry system for patient billings. With just a few quick strokes of a light pen, all patient treatment charges are entered into the billing system. Electronic claims submission or patient invoices are then automatically generated in batch or individual billing modes. When you think of the savings in office staff time, it really is a stroke of genius!

MediScan is the latest enhancement of the Practice PerfectTM office management software system—a system that is already helping many physicians improve cash flow and reduce office expenses. Practice Perfect automates patient billing and scheduling to ensure fast claims submission and collection. Plus, its powerful database, word processor and custom report generator create a truly integrated office management system that's flexible and easy to use.

If you're contemplating an advanced office management system, why not call or write Vicom today. After all, it never hurts to put a little genius to work at your office.

THE LOWER RESPIRATORY TRACT— More vulnerable to infection in smokers and older adults

Experience counts

Ceclo®
cefaclor
think of it first

Pulvules®
250 mg

For respiratory tract infections due to susceptible strains of indicated organisms.

Summary.

Consult the package literature for prescribing information.

Indication: Lower respiratory infections, including pneumonia, caused by *Streptococcus pneumoniae*, *Haemophilus influenzae*, and *Streptococcus pyogenes* (group A β -hemolytic streptococci).

Contraindication: Known allergy to cephalosporins.

Warnings: CECLOR SHOULD BE ADMINISTERED CAUTIOUSLY TO PENICILLIN-SENSITIVE PATIENTS. PENICILLINS AND CEPHALOSPORINS SHOW PARTIAL CROSS ALLERGICITY. POSSIBLE REACTIONS INCLUDE ANAPHYLAXIS.

Administer cautiously to allergic patients.

Pseudomembranous colitis has been reported with virtually all broad-spectrum antibiotics. It must be considered in differential diagnosis of antibiotic-associated diarrhea. Colon flora is altered by broad-spectrum antibiotic treatment, possibly resulting in antibiotic-associated colitis.

Precautions:

- Discontinue Ceclo in the event of allergic reactions to it.
- Prolonged use may result in overgrowth of nonsusceptible organisms.
- Positive direct Coombs' tests have been reported during treatment with cephalosporins.
- Ceclo should be administered with caution in the presence of markedly impaired renal function. Although dosage adjustments in

moderate to severe renal impairment are usually not required, careful clinical observation and laboratory studies should be made.

- Broad-spectrum antibiotics should be prescribed with caution in individuals with a history of gastrointestinal disease, particularly colitis.

• Safety and effectiveness have not been determined in pregnancy, lactation, and infants less than one month old. Ceclo penetrates mother's milk. Exercise caution in prescribing for these patients.

Adverse Reactions:

(percentage of patients): Therapy-related adverse reactions are uncommon. Those reported include:

- Gastrointestinal (mostly diarrhea): 2.5%.
- Symptoms of pseudomembranous colitis may appear either during or after antibiotic treatment.
- Hypersensitivity reactions (including morbilliform eruptions, pruritus, urticaria, and serum-sickness-like reactions that have included erythema multiforme [rarely, Stevens-Johnson syndrome] and toxic epidermal necrolysis or the above skin manifestations accompanied by arthritis, arthralgia, and frequent fever): 1.5%, usually subside within a few days after cessation of therapy. Serum-sickness-like reactions have been reported more frequently in children than in adults and have usually occurred during or following a second course of therapy with Ceclo. No serious sequelae have been reported. Antihistamines and corticosteroids appear to enhance resolution of the syndrome.

- Cases of anaphylaxis have been reported, half of which have occurred in patients with a history of penicillin allergy.
- As with some penicillins and some other cephalosporins, transient hepatitis and cholestatic jaundice have been reported rarely.
- Rarely, reversible hyperactivity, nervousness, insomnia, confusion, hypertension, dizziness, and somnolence have been reported.
- Other: eczema, 2%; genital pruritus or vaginitis, less than 1%; and rare v. thrombocytopenia.
- Abnormalities in laboratory results of uncertain etiology:**
 - Slight elevations in hepatic enzymes.
 - Transient fluctuations in leukocyte count (especially in infants and children).
 - Abnormal urinalysis, elevations in BUN or serum creatinine.
 - Positive direct Coombs' test.
 - False-positive tests for urinary glucose with Benedict's or Fehling's solution and Clinistix® tablets but not with Tes-Tape® (glucose enzymatic test strip, Lilly).

No Need to Feel Helpless...

Few things elicit feelings of depression, rage, helplessness and exasperation as thoroughly as receiving suit papers for a malpractice claim. This physician suffered just such an unpleasant experience... but his odds of winning were better than most. Why? Because his professional liability insurance carrier is Insurance Corporation of America.

The circumstances of this claim could occur and have occurred in operating rooms and doctors' offices everywhere. A routine surgical procedure went sour when, for no apparent reason, the patient suffered a cardiac arrest. Prompt and proper attempts at resuscitation failed. Our physician was sued along with other

During discovery, information was released indicating the patient had previously undergone similar surgery under anesthesia *without incident*. Because of ICA's diligence and our willingness to exhaust all legal remedies, the jury was allowed to hear the autopsy report as well as the patient's past medical history. Those defendants who settled quickly never had an opportunity to present that evidence. And ultimately our insured was exonerated.

surgeons in the operating room, the primary care physician, the anesthesiologist and the hospital.

Subsequent to surgery, it was determined the patient had arrested as a result of an allergic reaction to the anesthesia. Unlike other carriers involved, who settled quickly to avoid costly "death incident" litigation, ICA recognized our physician was not at fault. Fortunately for him, ICA is dedicated to the strongest claims defense possible. And because ICA also understands that a doctor's most valuable asset is his reputation, protecting it becomes *our* bottom line.

So ICA and the doctor fought alone — and at ICA's expense. ICA in-house attorneys screened and selected local defense attorneys skilled in malpractice cases and familiar with the judicial climate of the region. Then, they planned strategy, investigated the facts, and monitored the defense.

What does this mean to the doctor? He leaves the courtroom with his reputation, his policy limits and his checkbook intact, all because of his partnership with ICA, where we put reputation, principles and dignity ahead of the quick fix. The reason why? Because ICA is people who *care*. Period.

People Who Care

PHYSICIANS WANTED

JOB OPENING—A rural hospital in southern Utah is seeking the services of an Internal Medicine Specialist to establish practice in the immediate area. This person would be expected to diagnose and treat disease and injury of human internal organ systems, and examine patients for symptoms of organic or congenital disorders and determine nature and extent of injury or disorder using diagnostic aids. This person would also serve as the Medical Director of the hospital's Intensive Care/ Coronary Care Unit. Minimum requirements are a medical degree and completion of an Internal Medicine residency. Hospital will provide office space at no charge for the period of one year. Salary will be \$60,000 per year. The position is open immediately and would normally be 40 hours per week, although some call will be expected, particularly in the Intensive Care Unit, and the physician may be asked to work in hospital's emergency room. For further information please contact Utah Job Service, Cedar City Office, 160 E. 200 N., Cedar City, UT 84720; (801) 586-6585, J.O.#0592604.

DERMATOLOGIST. Visalia Medical Clinic has an opening for a BC/BE Dermatologist now staffed by one physician who has been with the Clinic for 15 years. Located in the San Joaquin Valley in central California and population approximately 350,000. Progressive city of 62,000, near national parks and the ocean. Compensation is incentive oriented with advancement to full partnership after one year. Excellent fringe benefits. If interested, CV to John G. Heinssohn, Administrator, 5400 W. Hillsdale, Visalia, CA 93291; (209) 733-5222.

INTERNIST. The Visalia Medical Clinic has an opening for a BC/BE General Internist. The Clinic is a 43 physician multispecialty group located in the San Joaquin Valley and central California. Medicine Department consists of five General Internists, along with subspecialties in Cardiology, Endocrinology, Gastroenterology, Medical Oncology and Hematology, Pulmonary Medicine, and also Neurology. Visalia is a progressive city of 65,000 people, near national parks and the ocean. Compensation is incentive oriented with advancement to full partnership after one year. Excellent fringe benefits. If interested, CV to John G. Heinssohn, Administrator, or Robert A. Havard, Jr, MD, Dept of Internal Medicine, 5400 W. Hillsdale, Visalia, CA 93291; (209) 733-5222.

WASHINGTON. General Internist BC/BE to join established Internist in satellite clinic 10 miles from main clinic across state line in Oregon. Main clinic is composed of 32 physician multispecialty group. Guaranteed income, plus excellent benefits. Send CV to Search Committee, Walla Walla Clinic, 55 W. Tietan, Walla Walla, WA 99362.

(Continued on Page 248)

FOR THE SECOND STRAIGHT YEAR, CAP/MPT GIVES REFUNDS AND LOWER RATES

Being a member of CAP/MPT pays in many ways.

For the second consecutive year, we're giving refunds. This year's comes to \$8 million. That's as much as \$5,015 for some members.

And rates will be lower in 1989. Mature assessments for all but two specialties will be lower than in

A CREDIT TO OUR MEMBERS

1987 and 1988, and more than 12% less in risk classes 1 through 5.

All this is in addition to CAP/MPT's exceptionally low rates each year. Depending on specialty, our members save up to 60% over comparable professional liability protection. There's even an additional reduction for members with a good claims record.

How do we do it? Careful selection of members, effective claims management and loss prevention programs.

For more information, call us toll-free:

Southern California (800) 252-7706

Northern California (800) 848-3366

And share the credit with over 3,000 of California's best physicians and surgeons.

COOPERATIVE OF AMERICAN PHYSICIANS, INC. MUTUAL PROTECTION TRUST

Headquarters: Los Angeles

Offices: Orange, San Diego, San Francisco Bay area

The Mutual Protection Trust (MPT) is an unincorporated interindemnity arrangement among physicians authorized by Section 1280.7 of the California Insurance Code. Members do not pay insurance premiums. Instead, they are assessed based on risk classification and number of months of coverage only for the amounts necessary to pay known claims and administrative costs. Members also make an initial trust deposit, which is refundable according to the terms of the trust agreement.

PHYSICIANS WANTED

Physicians wanted for leading clinic

Prestigious Chicago-based clinic group specializing in the treatment of venous disorders is expanding nationally. Our newest clinics in Los Angeles, San Diego and San Francisco are in need of physicians trained in internal medicine—or who have a broad base of medical experience. We will provide complete training in the latest proprietary techniques of treating venous disorders. We offer a six figure salary and bonus potential, along with malpractice insurance and health benefits. And since there are no weekend hours and a 40-hour work week, you will have plenty of leisure time. You won't have to worry about soliciting for patients or fighting insurance companies.

This is an outstanding opportunity for professional and financial advancement. If you are motivated to build a rewarding practice with the leader in the treatment of venous disorders, send your resume to:

Medical Director Vein Clinics of America

2340 S. Arlington Heights Road
Arlington Heights, Illinois 60005

GASTROENTEROLOGIST BC/BE to join multispecialty group near San Francisco. Excellent fringe benefits. Send CV to Dr Gary L. Hillman, Chief of Medicine, The Permanente Medical Group, 1150 Veterans Blvd, Redwood City, CA 94063. EEO/AA.

FAMILY PRACTICE, PHOENIX, ARIZONA. BC/BE, private practice, no OB. In-office lab and x-ray. Growing area, southwestern life-style at its best. Located across from modern, full-service hospital. Call (602) 846-7500 or résumé to Westside Family Practice, 5251 W. Campbell Ave, #105, Phoenix, AZ 85031.

INTERNAL MEDICINE DEPARTMENT CHAIRMAN. Maricopa Medical Center of Phoenix, Arizona, is seeking a chairman for its Department of Internal Medicine. We seek a well-qualified individual with recognized credentials in medical education, patient care, and research. Vigorous leadership abilities are required. Duties will include active supervision of the residency and fellowship training programs. The candidate must be BC in Internal Medicine. Maricopa Medical Center is an Equal Opportunity Employer. Those interested should submit inquiries and CV to J. Kipp Charlton, MD, Chairman, Medicine Chairman Search Committee, Maricopa Medical Center, PO Box 5099, Phoenix, AZ 85010.

ANNUAL SESSION HIGHLIGHTS

AMERICAN COLLEGE OF PHYSICIANS

presents the
70th Annual Session
April 13-16, 1989
Moscone Center,
San Francisco,
California

A program committed to science and social responsibility--a major event in internal medicine.

- **Clinical Controversies:** experts discuss various aspects of selected disease entities.
- **State of the Art Lectures:** focus on the molecular basis of cell differentiation and growth.
- **Symposia** on Today's Dilemmas: common problems in clinical practice today.
- **Specialty Updates** in all major areas by expert panels.
- **Special Presentations** on a wide variety of subjects of interest to the practitioner.
- **Lectures and Special Workshops** on the latest computer applications in clinical medicine and office practice.
- **Ticketed Programs** including over 200 Workshops, Minicourses and Meet-the-Professor sessions.
- **Two-Day Pre-Session Courses** on Critical Care, Infectious Diseases, and Clinical Decision Analysis; April 11th and 12th.

Savor San Francisco, too.

No other city combines the captivating charm, beauty and sophistication of the city by the Golden Gate. And all of it is easily accessible: the city's finest restaurants and fashionable shops, Fisherman's

Wharf, Ghirardelli Square, the Cannery. The cable cars, the vistas, the history, the people.... Come and enjoy this warm, wonderful city--and you, too, just might leave your heart in San Francisco.

How to register:

ALL ACP MEMBERS: complete the registration materials in the Advance Program you received in December.

NON-MEMBERS: please look for a 12-page insert appearing February 1, 1989 in *Annals of Internal Medicine*, with a complete schedule of events and a registration form, or... call 1-800-523-1546, ext. 1229 [in PA, (215) 243-1200, ext. 1229].

PRE-REGISTRATION DEADLINE: February 27, 1989.

AMERICAN COLLEGE OF PHYSICIANS
4200 Pine Street
Philadelphia, PA 19104

A Time for Renewal

GENERAL MED is an HMO serving the
Southern California counties of Orange, Los
Angeles, San Bernardino, Riverside, and San
Diego. We handle the entire business end of a
medical practice. In addition, we offer a very
competitive salary and excellent benefits—
including employer paid malpractice, compre-
hensive health benefits, life insurance, disa-
bility insurance, vacation, CME time, and a
401k plan.

If you are Board certified (or eligible) in your
specialty (including Family Practice) and pos-
sess a California license, please send your
CV to:

Nancy Boostrom
Physician Recruiter
